Who we are

We are two sisters, Monica and Giulia Ferrari, both graduated in Biological Sciences. In 2011, after years of study and research for the direct formulation of our products, our company, Rosa Selvatica was born.

Index

Rosa Selvatica is a small family company. With passion and love, with the greatest respect for the Nature and its rhythms, we grow and collect herbs and wildflowers in places pulsating with energy and far away from pollution sources. We turn them into bio and natural products good for the health, the wellness and the beauty of the body and of the mind.

We crop with passion our land surrounded by green woods in Aizurro (Lecco), 600 meters above the sea level, and we collect wild herbs in those areas where the Nature is still untouched, where the land conditions, the air quality, the sunlight exposure and the soil moisture, together, contribute to an optimal ripeness of the flowers. Where the signs of frenzy slow down, far away from roads and towns, the Nature's alchemy, gives us unexpected fruits.

The crop and harvesting of wild herbs are activities that come from the traditions; they allow us to pack for you precious remedies, concentrated and powerful, containing all the Nature forces and able to nourish not just our body and skin, but our emotions and spirit as well.

The quality of our products have been recognized and approved by the Ministry of Health of Rome and the National Public Health Service.

Birth of a product

In our small family laboratory we carefully follow all the stages of the production in order to guarantee a high quality product both in its ingredients and its efficiency.

Crop: we work closely our land, located in sunny places that encourage the growth of most of the herbs. We do not use chemical fertilizers, nor pesticides, but just follow the principles of Natural and Biological agriculture in order to guarantee a high quality product.

Harvest: we pick up by hand the flowers and herbs where the Nature is still untouched, along the mountain paths, where the forest gives way to green pastures, where the mountain waters flow and peace reigns. The collection and the transformation of herbs is not a simple work, but something through which the magic of the Nature and the wave of energy passes from the land, flora and fauna, through our hands to be given to you. To obtain the maximum concentration of active ingredients we pay attention to the collection period of the plants, it has to match with the right balsamic time and to the moon phases. Plants are extraordinary beings that live between heaven and earth. On one hand they collect light and heat coming from the cosmos, on the other they collect water and mineral salts that are found in the earth. In the plant these cosmic and terrestrial substances become living nature necessary to nourish both the man and the animal world.

Transformation: freshly harvested plants, still pulsating with energy and perfume arrive in our laboratory. Here they are immediately transformed in order to avoid losses of active ingredients; this helps us to ensure the maximum effectiveness of the final product. The preparations we make for you, which are also the main ingredients of our biological products are:

- **OLEOLITI:** are herbal extracts in oil. For the extraction of active ingredients we use just bio extra virgin olive oil, with its emollient, protective and anti-wrinkle properties. It soothes redness and irritation, it prevents skin cracking and peeling, it helps against aging, weakness and impoverishment of skin and hair. The long exposure to the sun, and the hot places, bring to the oil the properties of the plant and, at the same time, the energy and the heat of the sun.

- **HYDROALCOHOLIC EXTRACTS** : are herbal extracts in alcohol and water. In the extraction period, which lasts at least three weeks, the macerate is regularly shaken in order to make easier the extraction of the active properties.
- **AROMATIC WATERS** are the products of the steam distillation of herbs and flowers harvested in their balsamic time. When we distill we get the essential oil and the aromatic water. In the water remains dissolved a good percentage of essential oil which gives, in addition to the its properties, a natural fragrance as well.

Production: the entire production process is done by hand using small laboratory instruments. We always produce small batches in order to offer a fresh and vital product.

Packaging: we pack carefully, by hand , using glass for cosmetics and herbal remedies and compatible plastics bottles for the detergents. All with the highest respect for Nature.

Marketing: we sell our products believing that a natural remedy is natural not only for the ingredients that are used in its preparation, but also for the way in which the ingredients are processed.

Research

The basis of our work is a constant and continuous study and research, as it's our wish to improve more and more our products in order to bring the man to Nature, to its harmony, in accordance with its laws.

A good quality cosmetic product is very important, considering that our body breathe more through the skin than through the lungs. Nowadays in a cosmetic, the term "natural" often indicates the presence of just a small percentage of natural extract, all the other ingredients are synthetic products, chemical, petrochemical, they contain dangerous substances and often carcinogenic. It's the law that allows this statements.

It's therefore necessary to avoid that these substances, introduced through the skin in our body, accumulate in our tissues, liver, kidneys, lymph glands ..., causing health problems. Here the importance of choosing and being able to distinguish a good quality product.
